PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on experience in Python, SQL, Pandas, Tableau, Excel, and statistical analysis. Built data visualization, dashboarding, NLP, and insight-generation projects, with experience analyzing operational and financial datasets. Skilled in data cleaning, exploratory data analysis (EDA), visualization, and translating data into actionable insights.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript

Data Analysis: Pandas, NumPy, Statistics, Data Cleaning, Exploratory Data Analysis (EDA)

Data Visualization: Tableau, Matplotlib, Plotly, Excel, Dashboard Development

Machine Learning & AI: Scikit-learn, Classification, NLP, ML Pipelines, Keyword & Fuzzy Matching

Databases & Tools: SQLite, Flask, Streamlit, Git, GitHub, VS Code, Render

EDUCATION

Bachelor of Computer Applications (BCA) – AI & Data Science

2024 – 2027 | Graphic Era Hill University (GEHU)

- Specialization: Artificial Intelligence and Data Science
- Relevant Coursework: Data Analytics using Python, Machine Learning, Data Communication & Networks, MIS, Web Development

PROFESSIONAL EXPERIENCE

Quantitative Research Virtual Internship | 2026

- Built quantitative pricing models applying standard bond and options pricing methods to real financial datasets, replicating workflows used on investment-banking pricing desks.
- Applied statistical methods to model and analyze financial data across multiple market scenarios.

Data Analytics Virtual Internship | 2026

- Analyzed factory telemetry data across multiple machines and locations to surface downtime patterns and support faster root-cause identification.
- Built Tableau dashboards comparing downtime by factory location and device type, translating raw operational data into executive-ready visual insights.

KEY PROJECTS

ML Studio | 2025

- Built a machine learning model using Microsoft Azure ML Studio for data preprocessing, model training, and prediction.
- Evaluated model performance using appropriate metrics and visualized results to identify patterns and improve predictions.

AI-Powered Offline Data Visualizer & Insight Generator | 2026

- Developed a Python-based offline tool using Streamlit/Flask for dataset exploration, data processing, visualization, and insight generation without cloud dependency.
- Used Pandas for data processing, Plotly for interactive charting, and ReportLab to export polished insight reports.

CERTIFICATIONS & VIRTUAL EXPERIENCES

- J.P. Morgan Quantitative Research Virtual Experience – Forage (2026)
- Deloitte Data Analytics Virtual Experience – Forage (2026)
- Data Analytics using Python – GEHU (NumPy, Pandas, Matplotlib, Statistics)

SOFT SKILLS

Analytical thinking and quantitative problem solving • Clear communication of data insights to technical and non-technical audiences • Self-driven learner with a practical, project-first approach
