

# MITASH

Dehradun, Uttarakhand, India | sharmamitash23@gmail.com | Phone: +91 6398711408 | linkedin.com/in/mitashsharma | github.com/mitashsharma

## PROFESSIONAL SUMMARY

Aspiring Data Analyst who has shipped three working data products — from an offline data visualization and insight-generation tool to Tableau downtime dashboards — combining Python, SQL, and statistical analysis to turn raw data into decisions. Brings a build-first instinct to real business problems.

## TECHNICAL SKILLS

**Programming & Query:** Python (NumPy, Pandas, Matplotlib, Scikit-learn), SQL, JavaScript

**Data & Visualization:** Tableau, Matplotlib, Excel, dashboard design, telemetry data analysis

**ML & AI:** ML classification pipelines, NLP (keyword & fuzzy matching), pricing models

**Tools & Frameworks:** Flask, SQLite, Git, GitHub, VS Code, Render

## EDUCATION

**Bachelor of Computer Applications (BCA) – AI & Data Science** / Graphic Era Hill University, Dehradun 2024 – 2027

- Specialization: Artificial Intelligence and Data Science
- Key coursework: Data Analytics using Python, Machine Learning, Data Communication&Networks, MIS, Web Development

## PROFESSIONAL EXPERIENCE

**Quantitative Research Virtual Internship** / JP Morgan Chase & Co. (via Forage) 2026

- Built quantitative pricing models applying standard bond and options pricing methods to real financial datasets, replicating workflows used on live investment-banking pricing desks
- Applied statistical methods to model and analyze financial data across multiple market scenarios

**Data Analytics Virtual Internship** / Deloitte (via Forage) 2026

- Analyzed factory telemetry data across multiple machines and locations to surface downtime patterns and support faster root-cause identification
- Built Tableau dashboards comparing downtime by factory location and device type, translating raw operational data into executive-ready visual insights

## KEY PROJECTS

**GEHU AI Chatbot** 2025

- Built a college query chatbot using keyword and fuzzy-matching NLP (Python SequenceMatcher) with a Flask and SQLite backend
- Designed a glassmorphism frontend with an admin panel enabling non-technical staff to manage FAQs directly

**AI-Powered Offline Data Visualizer & Insight Generator** 2026

- Built a Python tool (Streamlit/Flask) that lets users explore datasets and generate visual insights entirely offline, with no cloud dependency
- Used Pandas for data processing, Plotly for interactive charting, and ReportLab to export polished insight reports

## CERTIFICATIONS & COURSEWORK

- JP Morgan Quantitative Research Virtual Experience – Forage (2026)
- Deloitte Data Analytics Virtual Experience – Forage (2026)
- Data Analytics using Python – GEHU (NumPy, Pandas, Matplotlib, statistics)
- Quantitative Aptitude & Placement Preparation – percentages, profit/loss, time-speed-distance

## SOFT SKILLS

Analytical thinking and quantitative problem solving • Clear communication of data insights to technical and non-technical audiences • Self-driven learner with a practical, project-first approach
